How to recognise if your asthma is getting worse:

- Have you had difficulty sleeping because of your asthma symptoms (including coughing)?
- Have you had asthma symptoms during the day (coughing, wheezing, chest tightness or breathlessness)?
- Has your asthma interfered with your usual activities (e.g. housework, work or school)?

If you have answered “yes” to one or more of the above, arrange an asthma review with your GP, Clinical pharmacist, or practice nurse. Take this plan to each visit so it can be updated. Take your symptom or peak flow diary to each visit.

Even if your asthma is well controlled, it is important that you attend your annual asthma review.

This is a vital opportunity to have your medicines reviewed and your device checked.

Did you know that 75 per cent of asthma admissions to hospital could have been avoided with better self-management?

The best way to manage your asthma is by taking your medication as prescribed and discussing the best way to prevent your asthma symptoms and a potential asthma attack with a health professional.

Do not stop taking your asthma medicines without talking to your GP or nurse first.

This plan will support you, your parents, or carers to manage your asthma especially if you’re having an asthma attack. A Nurse or GP will discuss this plan with you, it may help to discuss this with you carer/ partner.

If your asthma gets worse, it may be one of the first signs that you need a review so that your asthma symptoms can be improved.

You can reduce the need of taking more medication by treating your asthma symptoms quickly. This plan will help support you to take action if your symptoms get worse.
**GREEN ZONE**

Your asthma is well controlled when:
- Your sleep is not disturbed by asthma symptoms (coughing, wheezing, chest tightness or breathlessness)
- Your usual activities are not affected by asthma symptoms
- Average usage of reliever (i.e. Salbutamol) is **not greater than 4 puffs per week** (ideally 1 inhaler should last 6 to 12 months)
- You have no asthma symptoms during the day
- Your peak flow reading is **above** (80% of predicted or best)

**ACTION**
Continue to take your usual asthma medicines:

<table>
<thead>
<tr>
<th>Inhaler/Tablet</th>
<th>Name of preparation/colour</th>
<th>Dose and frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maintenance/Preventer/Controller</td>
<td>use every day even when well</td>
<td></td>
</tr>
<tr>
<td>Reliever only if you have symptoms despite using preventer</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Combined Maintenance and reliever therapy (MART)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Other asthma medication</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**AMBER ZONE**

Your asthma is getting worse if:
- You have difficulty sleeping because of asthma symptoms (coughing, wheezing, chest tightness or breathlessness)
- You have difficulty doing normal activities because of asthma symptoms
- You are using your reliever inhaler more or it lasts a shorter time
- Your peak flow reading is **below** (80% of predicted or best)

**ACTION**
- Make sure you are using your preventer/controller inhaler as usual: ___ puffs morning and night
- If on fixed dose, use your reliever inhaler up to ___ puffs ___ times a day
- If on maintenance and reliever therapy (MART) take additional inhaler puffs but do not exceed the maximum daily dose

If your symptoms do not improve or worsen despite taking the above steps, contact and or make an appointment with your GP or specialist nurse.

If you have been prescribed steroid tablets to keep at home, follow the advice given by your GP or specialist nurse and start the course as prescribed.

Tell your Heath Professional within 2 days that you have started the course

**RED ZONE**

Asthma emergency:
- Your symptoms are getting worse (coughing, wheezing, chest tightness or breathlessness)
- You are too breathless to speak easily (cannot speak full sentences)
- Your reliever inhaler is not helping
- Your peak flow reading is **below** (50% of predicted or best)

**TAKE ACTION NOW**
- If your breathing becomes worse and the reliever inhaler is not working, or you are blue & gasping call 999. Get help - call 999 urgently
- Sit up and loosen tight clothing
- Try to keep calm
- Consider unlocking doors so that the emergency service can get in
- If you have steroid tablets at home, start the course as prescribed.
- Take your reliever or MART inhaler through a spacer if appropriate:

Inhale 1 puff of Salbutamol each minute for up to 10 minutes via a spacer if appropriate. Repeat at 10-20 minute intervals until symptoms improve or help arrives, or as advised by your asthma nurse.
